

Sat, 12 Jan 2019 01:20:00 GMT automated deduction in equational logic pdf - Automated theorem proving (also known as ATP or automated deduction) is a subfield of automated reasoning and mathematical logic dealing with proving mathematical theorems by computer programs. Fri, 11 Jan 2019 04:06:00 GMT Automated theorem proving - Wikipedia - @j a i s t . a . c . j p research group: Hirokawa Laboratory research interests: term rewriting (confluence, termination, completion, strategies, unification, and complexity analysis) Sun, 13 Jan 2019 08:35:00 GMT Nao Hirokawa - JAIST KeYmaera is a hybrid verification tool for hybrid systems. It supports differential dynamic logic for hybrid programs and combines deductive, real algebraic, and computer algebraic prover technologies for verifying parameterized hybrid systems. Thu, 10 Jan 2019 15:27:00 GMT KeYmaera: A Hybrid Theorem Prover for Hybrid Systems - This is a list of mathematical logic topics, by Wikipedia page. For traditional syllogistic logic, see the list of topics in logic. See also the list of computability and complexity topics for more theory of algorithms. Sun, 13 Jan 2019 20:17:00 GMT List of mathematical logic topics - Wikipedia - The two-level lambda-calculus

gives a functional operational semantics to nominal terms unknowns; the result is a lambda-calculus with capturing and capture-avoiding substitution are represented and nominal terms style alpha-equivalence for level 1 variables (atoms) in the presence of level 2 variables (unknowns). Journal and conference papers by Murdoch Gabbay (Jamie) - Foundations of Mathematics - Textbook / Reference - with contributions by Bhupinder Anand, Harvey Friedman, Haim Gaifman, Vladik Kreinovich, Victor Makarov, Grigori Mints, Karlis Podnieks, Panu Raatikainen, Stephen Simpson, Foundations of Mathematics -
